                                                                                                                                                                  incorporated into a non-pathogenic host eg. E.coli, and express at high levels.
The variants have a higher binding efficiency and capacity for immunoglobulin, and may be used for purifying, detecting and isolating antibodies.
                                                                                                                                                                                                                                                                         Recombinant Protein G encoding Protein G fro

```
A 2.4kb HindIII fragment containing the entire coding sequence for Protein G was isolated from Streptococcus GX7805 using the 1.9kb Protein G coding sequence from Streptococcus GX7809. The Protein G has 1gG-binding activity which has been localised to the B repeating structure. Streptococcal Protein G variants comprising the B domains

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Protein G gene product may be modified allowing the variant to be imobilised and exhibit different binding profiles. The bound protein is useful in purification and detection of Igs and fragments.

cc a liposome; (b) providing a construct comprising a linking molety and a connecting molety bound together; and (c) combination so that the connecting molety bound together; and (c) combination so that the compression of the liposomal components and the construct and sonicating the combination so that the condition molety, and to facilitate the binding between them. The crossor of the linking molety, and to facilitate the binding between them. The conducts can be used for the delivery of diagnostic or therapeutic conducts can be used for the delivery of diagnostic or therapeutic agent, e.g. antibiotics, antidepressants, continuourigenics, antivirals, cytokines, hormones, imaging agents, controtransmitters, or stimulants. They can be used particularly for the connecting molety provides a liposomal delivery complex having improved cargeting efficiency. As a result of the binding between protein G and the Fc region of antibodies, protein G'shields the Fc regions of the crossor of antibodies from non-specific binding to cell-surfaces, other correcting, and anaromical structures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      or antibody fragment to a liposome. The construct comprises protein G and a linking molety for connecting the protein G to the liposome. Also described are: (1) a liposomal delivery vehicle comprising: (a) a liposome; and (b) a connecting molety connected to the liposome, which specifically binds the Fc region of an antibody, for connecting the antibody to the liposome; and (2) forming a liposomal correct comprising the compromed to the liposome.
                                                                    proteins, and anatomical structures. The present sequence represents an unidentified protein encoded by the same sequence which encodes

                        protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is one of the repeat regions of GRAB protein from S. pyogenes strain SF370 corresponding to residues 92-119. This fragment is useful in vaccine composition.
                                                                                                                                            related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to
                                                                                                                                                                                                                                 New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein \,\cdot\,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Streptococcus pyogenes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GRAB protein; protein G related alpha2M binding protein; alpha2-macroglobulin; group A Streptococcus; GAS; antibio

                                                                                                                                                                                                                                                                                    The patent discloses a new family of proteins termed GRAB (protein G related alpha2M binding protein) from Streptococcus pyogenes which have the ability to bind alpha2-macroglobulin (alpha2M) and show homology to protein G of group G Streptococcus. GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a fragment of GRAB protein from S. pyogenes strain SF370 corresponding to residues 34-56. This fragment is capable of binding alpha2M and useful in vaccine composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New alpha2M binding protein for generating a protective immune response to group A streptococcus and purifying the binding protein \,\cdot\,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI;

GRAB protein and peptides derived from it are used in vaccine compositions for generating a protective immune response against group A Streptococcus. Antibodies against GRAB are useful for treating Streptococcus pyogenes infections. The protein is also useful for purifying alpha2M from a sample. The present sequence is a GRAB peptide EKL 24 useful in vaccine composition. It was used to produce immunoglobulin G (IGG) antibodies specific for native GRAB protein in sheep. The peptide has a cysteine insert at the C-terminal

A phage lambda EMBL library of S. dysgalactiae 8215 DNA was analyzed for fast-acting alpha-2-macroglobulin (FAM)-, BSA- and IgG-binding activity. Clone lambda-SD1, which expressed all 3 activities, was analyzed to obtain DNA encoding the FAM-binding protein, MAG. The mag gene (given in Q89197) encodes a 44 kDa protein (R71929).

Clone lambda-SD1, which expressed all 3 activities, was analyzed to obtain DNA encoding the SA-binding protein, MAG. The mag gene (given in 086080) encoded a 44 kDa MAG protein (R71670).
                                                                                                                                                                                                                                                                                                                    DNA encoding a serum albumin binding protein - prods. for sepns., detection, quantification, p stabilisation or vaccine development

The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABL57737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from a sequence of the contraction of the printed at the was obtained in electronic format directly from the part of the printed at the was obtained in electronic format directly from the part of the printed at the was obtained in electronic format directly from the part of the printed at the was obtained in electronic format directly from the part of the printed at the was obtained in electronic format directly from the part of the printed at the was obtained in electronic format directly from the printed at the pr

                                                                                                                                                                                                                                                                                                                         This sequence comprises the EspB virulence factor of a rabbit centeropathogenic Escherichia coli (RDEC-1) strain. Its amino acid sequence was deduced from an isolated espB gene (see AAT91293). The predicted EspB polypeptide shows sequence homology more to predicted EspB polypeptide shows sequence homology more to centerohaemorrhagic E. coli (EHEC) than to enteropathogenic E. coli (EHEC). Claimed novel, isolated EspA polypeptides (see also AAW27284-5) are characterised by: (a) being a secreted protein from EPEC or EHEC; and (b) having a mol.wt. of about 25 kD as determined by SDS-PAGE. Recombinant EspA polypeptides can be expressed in host caused by EspA-producing E. coli, and in a method for ameliorating disease caused by EspA-producing coli, and in a method for ameliorating capainst EspA can be used in the diagnosis of infection.

One clone, which expressed both activities, was analyzed to obtain DNA encoding the FAM-binding protein, MIG (AAR71929). The mig gene is given in AAQ89196.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic Strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from a cloned population of
Trypanosoma brucei (TREU927/4 GUTat 10.1) was mechanically
sheared to give a tight size distribution (approx 2 kb).
The v + i method used for the library construction is
described in detail in Smith, H.O. and Venter, J.C.
(Making small insert libraries for whole genome shotgun
sequencing projects. In Genome Sequencing: A practical

This GSS is part of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii, saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Souciet, J.L., Aigle, M., Artiguenave, F., Blandin, G., Bolottin-Fukuhara, M., Bon, E., Brottier, P., Casare, olio, B., Gerottier, B., Clorente, B., de-Montigny, J., Dujon, B., Durrens, P., Lepingle, A., Llorente, B., Malpertuy, A., Neuveglise, C., Ozier-Kalogeropoulos, O., Potier, S., Saurin, W., Tekala, F., Toffano-Nioche, C., Wesolowski-Louvel, M., Wincker, B. and Wolferner, B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Saccharomyces kluyveri
Eukaryota; Fungi; Ascomycota; Saccharomycotina; Saccharomycetes;
Saccharomycetales; Saccharomycetaceae; Saccharomyces.

1 (bases 1 to 1163)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Wincker, P. and Weissenbach, J. Genomic exploration of the hemiascomycetous yeasts: 1. A set of yeast species for molecular evolution studies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Neuveglise, C., Bon, E., Lepingle, A., Wincker, P., Artiguenave, F., Gaillardin, C. and Casaregola, S.
Genomic exploration of the hemiascomycetous yeasts: 9.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila, Candida tropicalls and Yarrowia lipolytica. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Genoscope
